Impaktní faktor časopisu je míra frekvence, se kterou je „průměrný článek“ časopisu citován v příslušném roce. Impaktní faktor tak pomáhá ohodnotit relativní důležitost časopisu (zejména v porovnání s ostatními časopisy ve stejném oboru). Impaktní faktor se počítá jako poměr počtu běžných citací článků publikovaných během dvou předchozích let a celkového počtu článků publikovaných ve dvou předchozích letech.

Cited half-life („citační poločas“) časopisu je počet let od příslušného roku, během nichž se objevilo 50 % všech citací článků daného časopisu. Tento údaj pomáhá ohodnotit délku „života“ většiny citovaných článků publikovaných v časopise.
